Risk of Hospitalization, severe disease, and mortality due to COVID-19 and PIMS-TS in children with SARS-CoV-2 infection in Germany

AL Sorg, M Hufnagel, M Doenhardt, N Diffloth, H Schroten, R v. Kries, R Berner, J Armann **doi:** https://doi.org/10.1101/2021.11.30.21267048

Abstract

Background Although children and adolescents have a lower burden of SARS-CoV-2-associated disease as compared to adults, assessing absolute risk among children remains difficult due to a high rate of undetected cases. However, without more accurate case numbers, reliable risk analyses are impossible.

Methods We combine data from three sources — a national seroprevalence study (the SARS-CoV-2 KIDS study), the German statutory notification system and a nationwide registry on children and adolescents hospitalized with either SARS-CoV-2 or Pediatric Inflammatory Multisystem Syndrome (PIMS-TS) — in order to provide reliable estimates on children's hospitalization, intensive care admission and death due to COVID-19 and PIMS-TS.

NHS to scrap routine surgeries to hit No10's booster deadline: Health chiefs say their 'absolutely only option' is to cancel planned ops to deliver 50m jabs by January — with waiting list for elective care already at 6million

- NHS leaders warn some care will have to give in order meet huge 50m jab drive
- Army and volunteers have been drafted in, but health staff need to oversee them
- NHS waiting lists are at a 5.8million and there are 740k 'missing' cancer patients

By JOHN ELY SENIOR HEALTH REPORTER FOR MAILONLINE

PUBLISHED: 06:29 EST, 3 December 2021 | UPDATED: 08:02 EST, 3 December 2021

The NHS is set to scrap yet more routine operations in order for staff to shift their attentions to the UK's mammoth booster rollout, health leaders have warned.

Boris Johnson has promised to offer all 53million eligible adults a booster Covid vaccine by the end of January to shield the nation from the incoming **Omicron** wave.

But with crippling staff shortages and waiting lists already at an all-time high, health chiefs say it will come at the cost of planned operations and health scans.

13 hospitals closing departments, ending services

Alia Paavola - Friday, December 3rd, 2021 Print | Email

Listen ► A TEXT

Several healthcare organizations have closed medical departments or ended services at facilities to shore up finances, focus on more in-demand services or address staffing shortages.

Below are 13 closures or service endings announced, advanced or finalized in the last two months, as reported on by *Becker's Hospital Review*.

1. Mercyhealth applies to end inpatient care at Illinois hospital

Mercyhealth, which has seven hospitals in Wisconsin and Illinois, filed an application with the Illinois Health and Services Review Board to end inpatient services at Javon Bea Hospital-Rockton next year.

2. New York hospital temporarily closes ED over staffing shortages

Mount Sinai South Nassau closed the freestanding Long Beach (N.Y.) Emergency Department for five days because of nursing staff shortages caused by the state's COVID-19 vaccination mandate. The facility was closed on Nov. 22 and reopened Nov. 26, according to the *Long Island Press*.

3. St. Luke's opens 80-room hospital, closes ED at nearby campus

Bethlehem, Pa.-based St. Luke's University Health System on Nov. 20 opened its St. Luke's Carbon Campus hospital in Leighton, Pa. The same day, the hospital closed its emergency room at St. Luke's Lehighton, which houses its inpatient behavioral health unit, outpatient services, nursing facility and patient acute rehabilitation center.

4. Tower Health to temporarily close urgent care centers on Sundays

West Reading, Pa.-based Tower Health will temporarily close its urgent care centers on Sundays starting Nov. 28 because of staffing shortages.

Northern Territory announces mandatory vaccines for workers and \$5000 fines for those who don't comply

One Australian jurisdiction has announced one of the strictest vaccine mandates in the world with certain people facing huge fines.

UPDATED: Clarity On Forced Vaccinations And Aboriginals In The NT.

What's happening in Australia, are Australian troops involved in forced vaccination? The answer is intentionally confusing. The troops are preventing Aboriginals from leaving the area, and being told that they are doing it for a number of different reasons:

- 1. To prevent the spread of COVID19 to "vulnerable" people.
- 2. For the good of the community people are scared and they are calming them. (with guns)
- 3. To facilitate the administration and availability of a "life saving" vaccine.

While Australian troops might not personally be administering the deadly vaccine, they are blocking Aboriginal peoples from leaving the area and they have guns.

Also some Aboriginal Elders are confused, and are being told that story as well. This information has come from direct conversation through a number of service men and women, and tribal members.

The people are then being held and not allowed to leave the areas, bussed off to camps on the basis of tests which are unable to actually determine real viral infection. Additionally anyone who has been in contact with a "positive" test, are also being taken to "quarantine" camps.

Nonpharmaceutical Measures for Pandemic Influenza in Nonhealthcare Settings—Personal Protective and Environmental Measures

Jingyi Xiao¹, Eunice Y. C. Shiu¹, Huizhi Gao, Jessica Y. Wong, Min W. Fong, Sukhyun Ryu, and Benjamin J. Cowling⊠ Author affiliations: University of Hong Kong, Hong Kong, China Cite This Article

Abstract

There were 3 influenza pandemics in the 20th century, and there has been 1 so far in the 21st century. Local, national, and international health authorities regularly update their plans for mitigating the next influenza pandemic in light of the latest available evidence on the effectiveness of various control measures in reducing transmission. Here, we review the evidence base on the effectiveness of nonpharmaceutical personal protective measures and environmental hygiene measures in nonhealthcare settings and discuss their potential inclusion in pandemic plans. Although mechanistic studies support the potential effect of hand hygiene or face masks, evidence from 14 randomized controlled trials of these measures did not support a substantial effect on transmission of laboratory-confirmed influenza. We similarly found limited evidence on the effectiveness of improved hygiene and environmental cleaning. We identified several major knowledge gaps requiring further research, most fundamentally an improved characterization of the modes of person-to-person transmission.

Suppression of RNA recognition by Toll-like receptors: the impact of nucleoside modification and the evolutionary origin of RNA

Katalin Karikó 1, Michael Buckstein, Houping Ni, Drew Weissman

Affiliations + expand

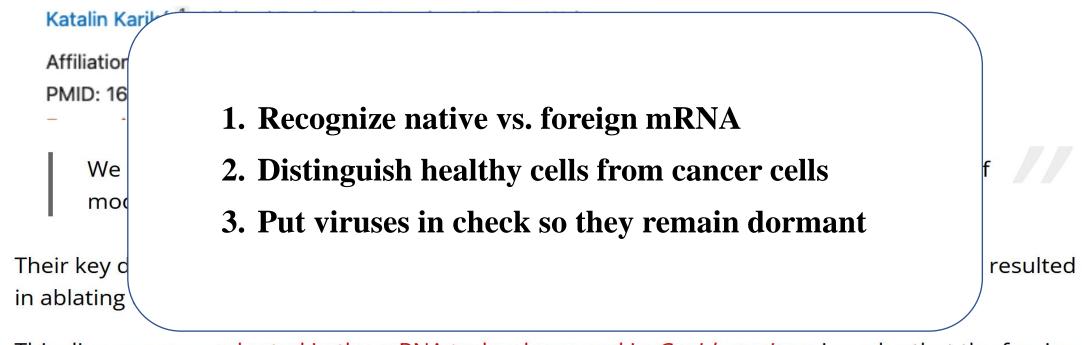

PMID: 16111635 DOI: 10.1016/j.immuni.2005.06.008

We show that RNA signals through human TLR3, TLR7, and TLR8, but incorporation of modified nucleosides m5C, m6A, m5U, s2U, or pseudouridine ablates activity.

Their key discovery, that by **modifying the RNA code (modifying the nucleoside uridine)**, resulted in ablating the innate immune response, involved toll-like receptors (TLR).

This discovery was <u>adopted in the mRNA technology used in Covid vaccines</u>, in order that the foreign vaccine mRNA could enter cells without being destroyed. Below is the mRNA code from the Pfizer vaccine demonstrating the modified Uridine nucleoside by denoting it as Ψ (modified) instead of its natural form U (Uridine). To be precise: every Uridine (U) has been replaced by 1-methyl-3'-pseudouridylyl (Ψ).

Prior SARS-CoV-2 infection rescues B and T cell responses to variants after first vaccine dose

A boost from infection

During clinical trials of severe acute respiratory syndrome coronavirus 2 vaccines, no one who had survived infection with the virus was tested. A year after the pandemic was declared, vaccination of previously infected persons is a reality. Reynolds *et al.* address the knowledge gap in a cohort of UK health care workers given the Pfizer/BioNTech vaccine in which half of the participants had experienced natural virus infections early in the pandemic (see the Perspective by Crotty). Genotyping indicated that a genetic component underlies heterogeneity in immune responses to vaccine and to natural infection. After vaccination, naïve individuals developed antibody responses similar to those seen in naturally infected persons, but T cell responses were more limited and sometimes absent. However, antibody and memory responses in individuals vaccinated after infection were substantially boosted to the extent that a single vaccine dose is likely to protect against the more aggressive B.1.1.7 variant. It is possible that the messenger RNA vaccine has an adjuvant effect, biasing responses toward antibody generation.

Official Govt Reports Show Vaccinated Lost 40% Of Their Immunity

Published on October 19, 2021

Written by theexpose.uk

Latest UK PHE Vaccine Surveillance Report figures on Covid cases show that doubly vaccinated 40-70 year olds have lost 40 percent of their immune system capability compared to unvaccinated people.

Their immune systems are deteriorating at around five percent per week. If this continues then 30-50 year olds will have total immune system degradation, and zero viral defence by Christmas and all doubly vaccinated people over 30 will have lost their immune systems by March next year.

'We Made a Big Mistake' — COVID Vaccine Spike Protein Travels From Injection Site, Can Cause Organ Damage

Research obtained by a group of scientists shows the COVID vaccine spike protein can travel from the injection site and accumulate in organs and tissues including the spleen, bone marrow, the liver, adrenal glands and in "quite high concentrations" in the ovaries.

Some Definitions quoted in this important study

ACS: Acute coronary syndrome

Acute coronary syndrome is a term used to describe a range of conditions associated with sudden, reduced blood flow to the heart.

One such condition is a heart attack (myocardial infarction) — when cell death results in damaged or destroyed heart tissue. Even when acute coronary syndrome causes no cell death, the reduced blood flow changes how your heart works and is a sign of a high risk of heart attack. Mayo Clinic

666 Cases of Heart Disease in 12 to 17-Year-Olds After COVID Shots

Views 9594

Posted on: Monday, December 6th 2021 at 3:45 pm

Written By: Brian Shilhavy

Originally published on www.healthimpactnews.com

The **COVID-19** shots cause heart disease, mainly myocarditis and pericarditis, which is destroying the health of our young people.

This is a fact that is no longer in dispute, as even the CDC admits this, as **their most** recent report states:

As of November 24, 2021, VAERS has received 1,949 reports of myocarditis or pericarditis among people ages 30 and younger who received COVID-19 vaccine. Most cases have been reported after mRNA COVID-19 vaccination (Pfizer-BioNTech or Moderna), particularly in male adolescents and young adults. (Source.)

Doctor who vaccinated 900 calls blood clots at capillary level an 'absolutely new phenomenon'

By World Tribune on August 8, 2021

by WorldTribune Staff, August 8, 2021

A Canadian doctor who has given the Covid vaccine to more than 900 patients has reported that 62 percent of those patients are positive for blood clots.

Dr. Charles Hoffe, who has been practicing medicine for 28 years in British Columbia, said he has given about 900 doses of the Moderna experimental mRNA vaccine and the core problem he has seen are microscopic clots in his patients' tiniest capillaries.

Abstract

Although myocarditis and pericarditis were not observed as adverse events in coronavirus disease 2019 (COVID-19) vaccine trials, there have been numerous reports of suspected cases following vaccination in the general population. We undertook a self-controlled case series study of people aged 16 or older vaccinated for COVID-19 in England between 1 December 2020 and 24 August 2021 to investigate hospital admission or death from myocarditis, pericarditis and cardiac arrhythmias in the 1–28 days following adenovirus (ChAdOx1, n = 20,615,911) or messenger RNA-based (BNT162b2, n = 16,993,389; mRNA-1273, n = 1,006,191) vaccines or a severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) positive test (n = 3,028,867). We found increased risks of myocarditis associated with the first dose of ChAdOx1 and BNT162b2 vaccines and the first and second doses of the

CDC head says benefits of COVID vaccines outweigh risk of myocarditis

Mary Kekatos Acting U.S. Health Editor For Dailymail.Com 24/06/2021

The director of the Centers for Disease Control and Prevention (CDC) says the benefits of COVID-19 vaccines outweigh the risk of heart inflammation in teenagers and young adults because the jab will reduce cases, hospitalizations and deaths.

If you consider the under-reporting factor, which I've based on the Pfizer phase 3 clinical data — which is probably questionable data anyway — the under-reporting factor is 31,... So to get an accurate count of adverse events, you need to multiply the VAERS numbers by at least 31,... It's really staggering. We're in the millions.

Safety Signals for COVID Vaccines Are Loud and Clear. Why Is Nobody Listening?

The public deserves a complete and transparent accounting of the Centers for Disease Control and Prevention's safety monitoring, including the results of all interim reports and analyses, whether through a Freedom of Information Act request, Congressional order or some other means.

'800 TIMES DEADLIER': COVID SHOTS ARE THE DEADLIEST 'VACCINES' IN HUMAN HISTORY

https://noqreport.com/2021/11/21/800-times-deadlier-covid-shots-are-the-deadliest-vaccines-in-human-history/

STORY AT-A-GLANCE

- Data suggest 1 in 317 boys aged 16 to 17 will get myocarditis from the COVID shots, and after a third booster, that number may be even higher
- VAERS reporting is likely underreported by a factor of 41. Since there are over 8,000 domestic deaths reported to VAERS, and 98% of those deaths are "excess deaths," this suggests that as many as 300,000 Americans may have died from the COVID shots thus far
- Calculations based on government data from 35% of the world's population suggest we're killing approximately 411 people per million doses on average. Moderna and Pfizer are both two-dose regimens, which pushes this to 822 deaths per million fully vaccinated. And that's just the short-term mortality. We still have no concept of how these shots might impact mortality and morbidity in the longer term

Public Health and Medical Professionals for Transparency

This nonprofit, made up of public health professionals, medical professionals, scientists, and journalists exists solely to obtain and disseminate the data relied upon by the FDA to license COVID-19 vaccines. The organization takes no position on the data other than that it should be made publicly available to allow independent experts to conduct their own review and analyses. Any data received will be made public on this website.

Four days after the Pfizer vaccine was approved for ages 16+, we <u>submitted</u> a Freedom of Information Act Request to the FDA for all of the data within Pfizer's COVID-19 vaccine biological product file. We have now <u>sued</u> the FDA for not releasing the data. Click below for court documents and for productions of Pfizer's documents from the FDA.

Ireland

72% of peak

667 infections per 100K people reported last 7 days

Updated 6:06 PM PST

Ireland is reporting **4,711** new infections on average each day, 72% of the peak — the highest daily average reported on January 9.

There have been **656,600** infections and **5,835** coronavirus-related deaths reported in the country since the pandemic began.

Vaccination

Ireland has administered at least **8,925,488** doses of COVID vaccines so far. Assuming every person needs 2 doses, that's enough to have vaccinated about **90.3%** of the country's population.

(severe acute respiratory syndrome, 2002 and 2003), MERS (Middle East respiratory syndrome, since 2012), and now Covid-19 (since 2019). Scientific evidence and ecologic reality suggest that coronaviruses will emerge again in the future, potentially posing an existential threat. The betacoronaviruses that caused these epidemics are globally distributed in numerous species of bats. The full virologic and geographic extent of this enzootic reservoir is unknown; however, it has been increasingly spilling over into humans and other mammals. Because of genetic and structural receptor conservation among mammalian species, many of these animal betacoronaviruses are "preadapted" for infecting humans by binding to angiotensin-converting—enzyme 2 (ACE2) receptors, which facilitates viral spillovers and ongoing transmission. Some animal coronaviruses that may have pandemic potential have already been identified, and many more remain to be detected.

We need a research approach that can characterize the global "coronaviral universe" in multiple species, characterize the natural history and pathogenesis of coronaviruses in laboratory animals and in humans, and apply this information in developing broadly protective "universal" vaccines (protecting against all betacoronaviruses, and ideally all coronaviruses).

Abstract

Since the first reports of novel coronavirus in the 2020, public health organizations have advocated preventative policies to limit virus, including stay-at-home orders that closed businesses, daycares, schools, playgrounds, and limited child learning and typical activities. Fear of infection and possible employment loss has placed stress on parents; while parents who could work from home faced challenges in both working and providing full-time attentive childcare. For pregnant individuals, fear of attending prenatal visits also increased maternal stress, anxiety, and depression. Not surprising, there has been concern over how these factors, as well as missed educational opportunities and reduced interaction, stimulation, and creative play with other children might impact child neurodevelopment. Leveraging a large on-going longitudinal study of child neurodevelopment, we examined general childhood cognitive scores in 2020 and 2021 vs. the preceding decade, 2011-2019. We find that children born during the pandemic have significantly reduced verbal, motor, and overall cognitive performance compared to children born pre-pandemic. Moreover, we find that males and children in lower socioeconomic families have been most affected. Results highlight that even in the absence of direct SARS-CoV-2 infection and COVID-19 illness, the environmental changes associated COVID-19 pandemic is significantly and negatively affecting infant and child development.

56M Smallpox

1520

40-50M Spanish Flu

1918-1919

Plague of Justinian 541-542

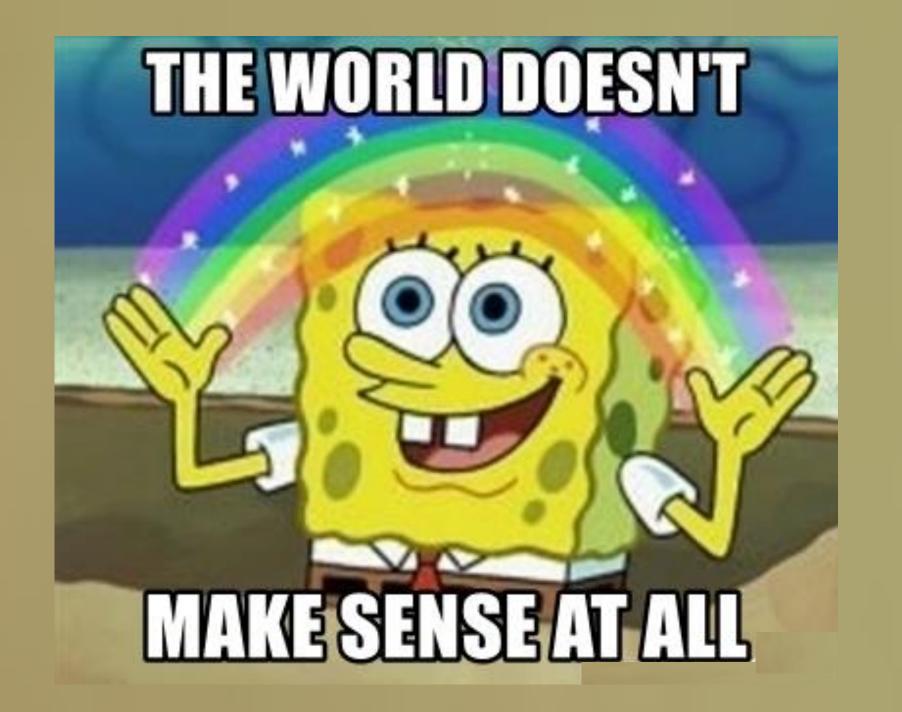

30-50M

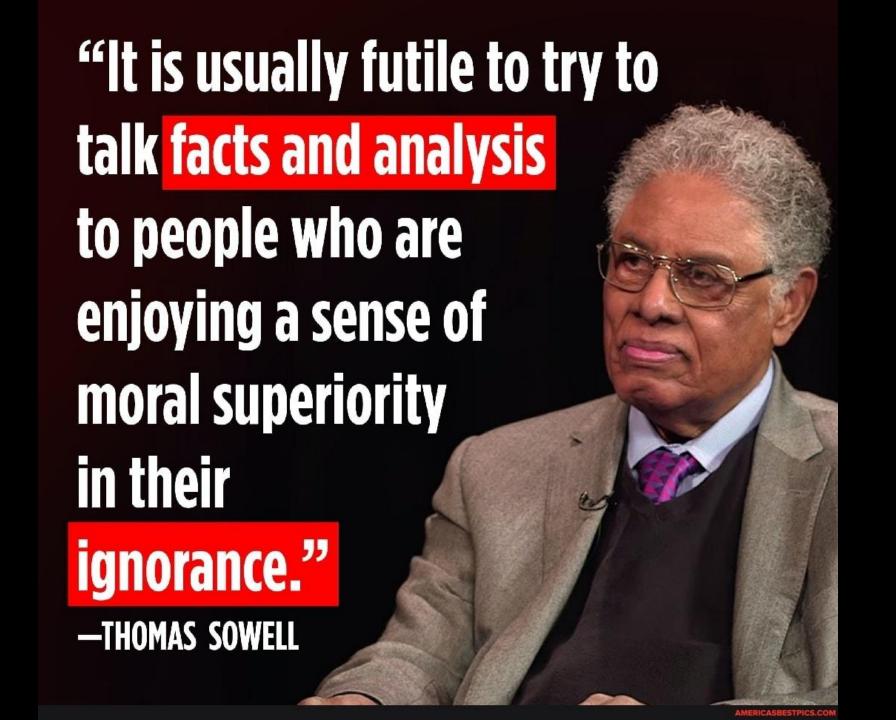

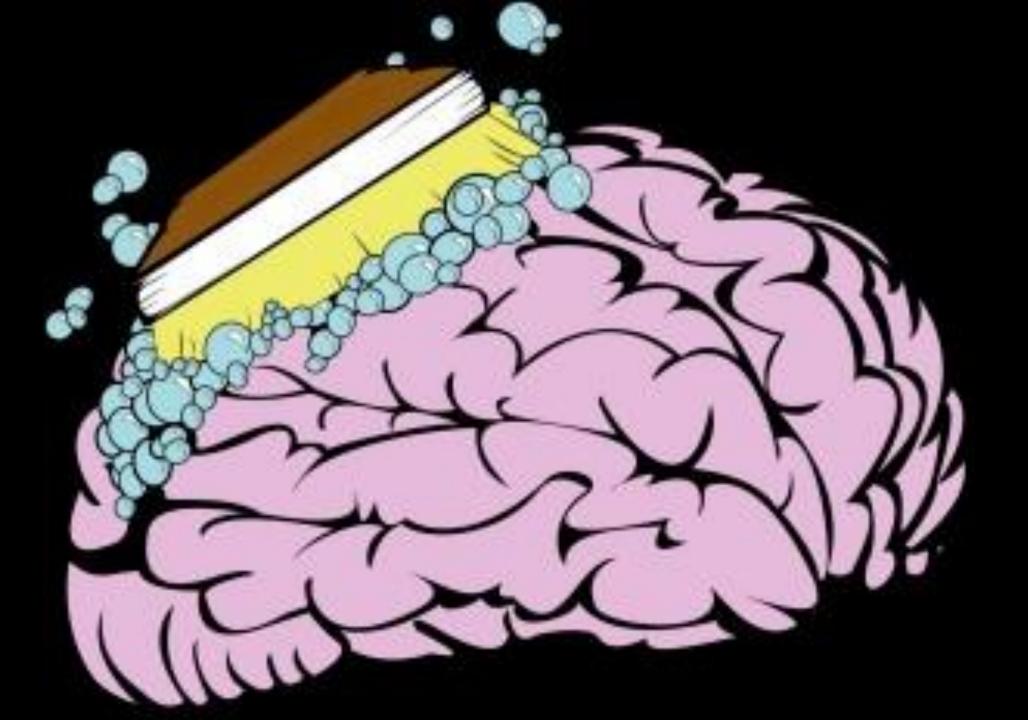

The plague originated in rats and spread to humans via infected fleas. ↑ The outbreak wiped out 30-50% of Europe's population. It took more than 200 years for the continent's population to recover.

Smallpox killed an estimated 90% of Native Americans. In Europe during the 1800s, an estimated 400,000 people were being killed by smallpox annually. The first ever vaccine was created to ward off smallpox.

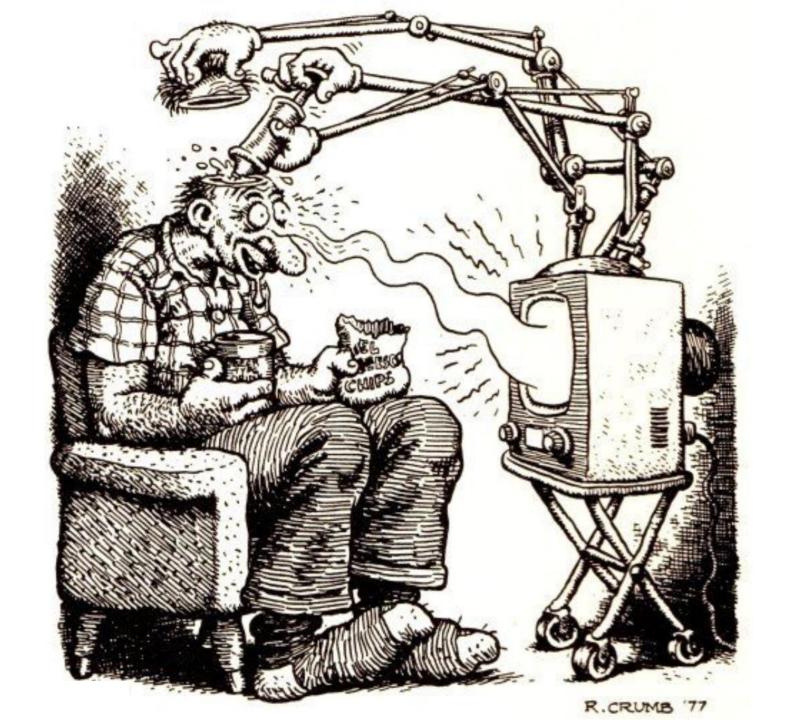

The death toll of this plague is still under debate as new evidence is uncovered, but many think it may have helped hasten the fall of 140 the Roman Empire.

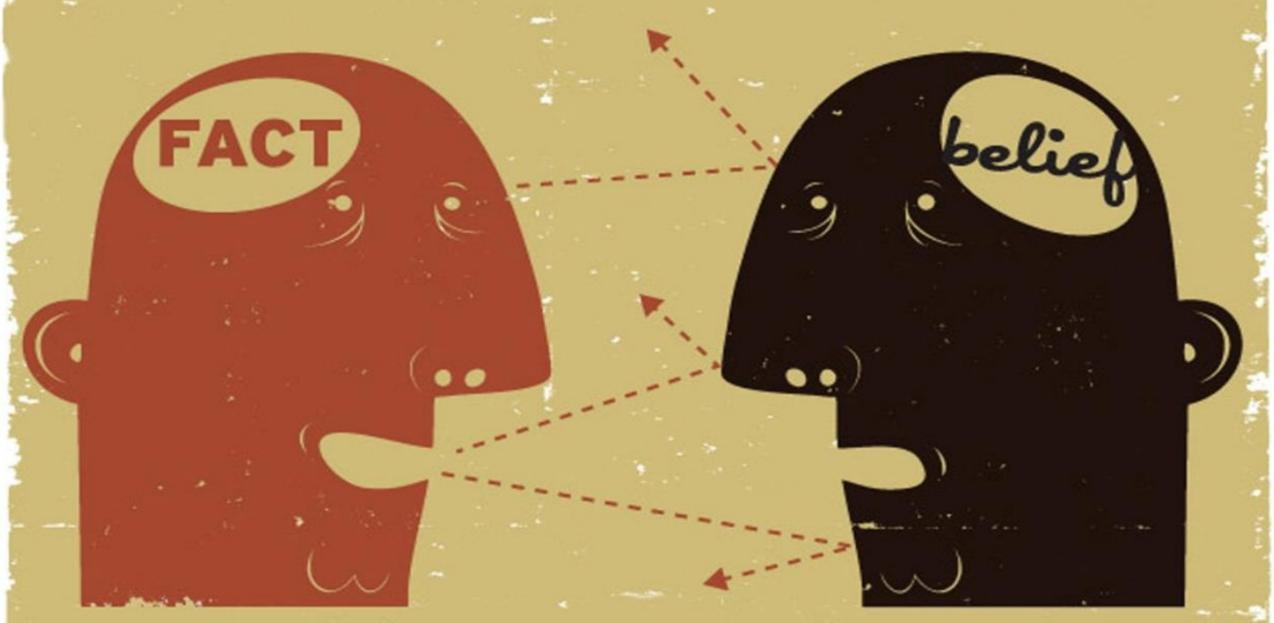

If you tell a lie big enough and keep repeating it, people will eventually come to believe it.

(Joseph Goebbels)

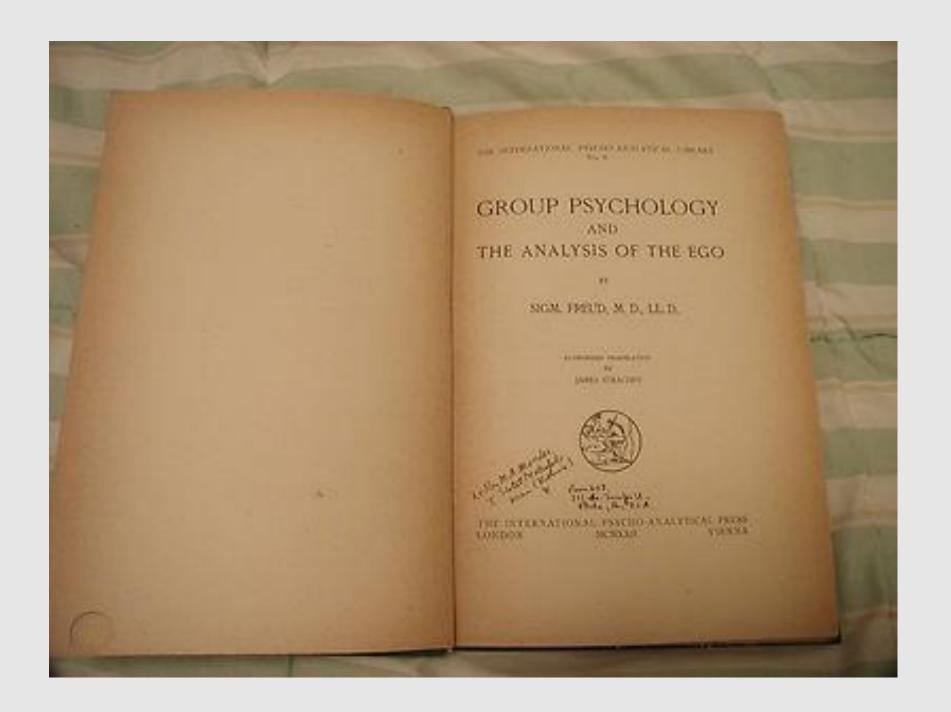

"The ideal subject
of totalitarian rule
is not the convinced Nazi
or the dedicated communist,
but people for whom
the distinction between
fact and fiction, true
and false, no longer exists."

 Hannah Arendt, "The Origins of Totalitarianism" (1951)

The masses have never thirsted after truth. They turn aside from evidence that is not to their taste, preferring to deify error, if error seduce them. Whoever can supply them with illusions is easily their master; whoever attempts to destroy their illusions is always their victim.

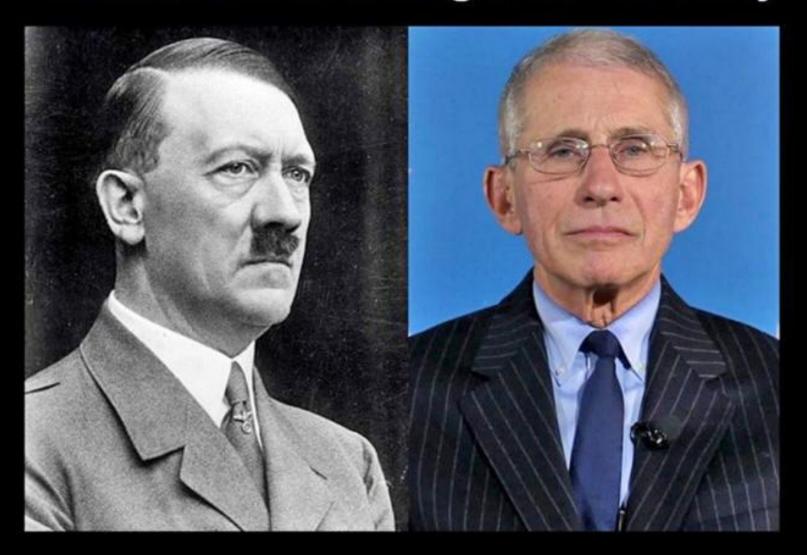

Gustave Le Bon

THE CROWD: A STUDY OF THE POPULAR MIND

Genocide: Crimes Against Humanity

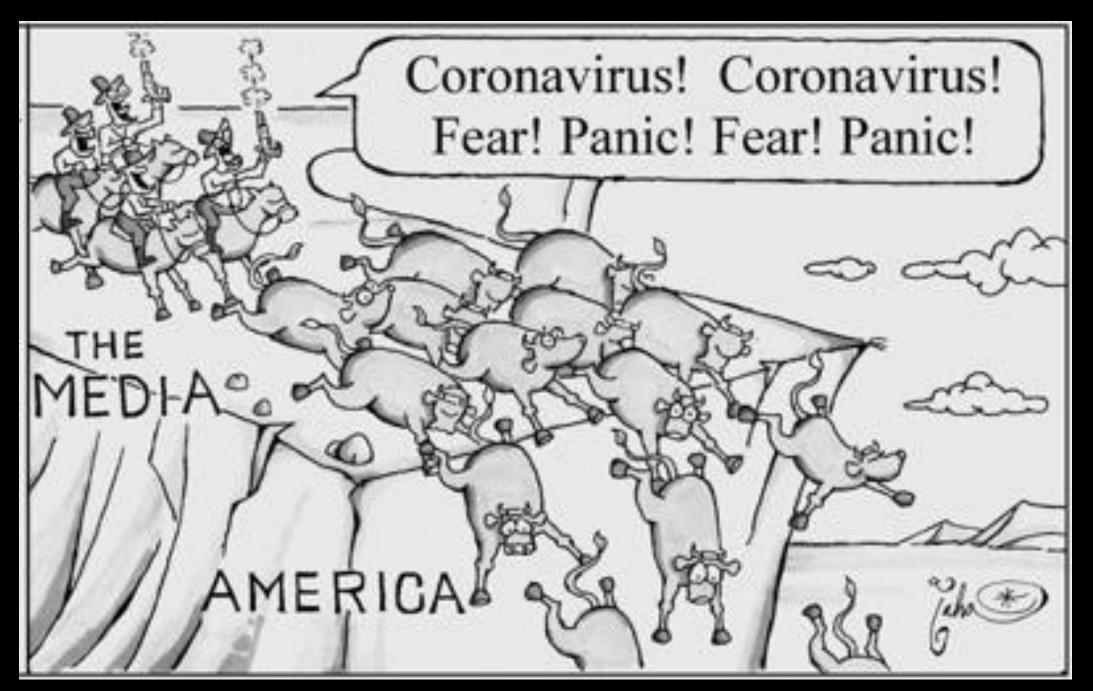

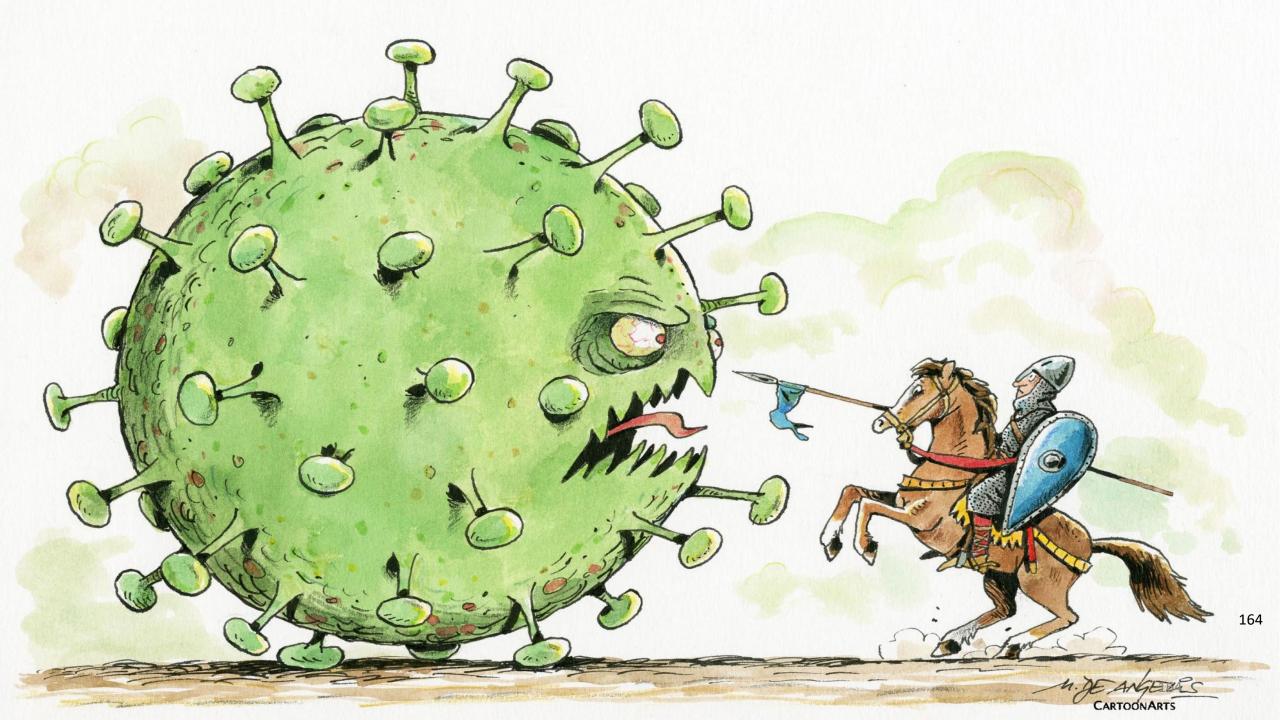

Four things that need to be in place for Mass Formation Phenomena to occur

- There needs to be a lot of socially isolated people, people who experience a lack of social bond.
- There needs to be a lot of people who experience life as not making sense.
- There needs to be a lot of free-floating anxiety.
- There needs to be a lot of free-floating psychological discontent.

Free-Floating Anxiety Symptoms

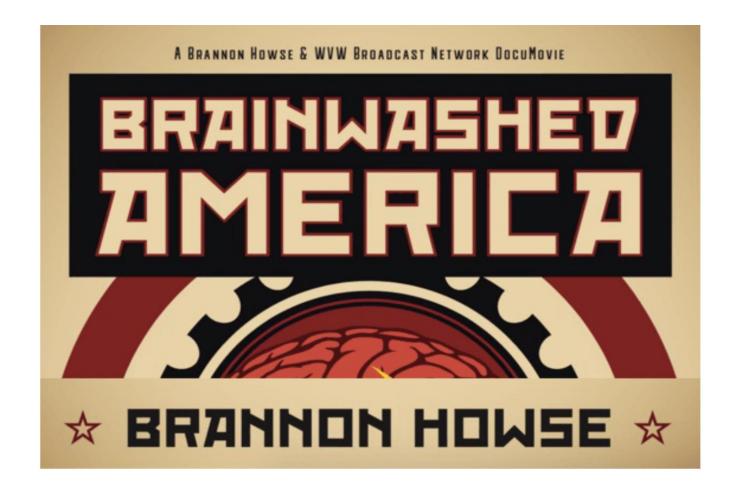

One of the hallmarks of totalitarianism is mass conformity to a psychotic official narrative. Not a regular official narrative, like the "Cold War" or the "War on Terror" narratives. A totally delusional official narrative that has little or no connection to reality and that is contradicted by a preponderance of facts. C. J. Hopkins

12 mind-control tactics used by globalist establishment elites to change the way Americans think

12 Mind-Control Tactics

- 1) Remove or discredit leaders that are principled, courageous, and people of conviction and morality.
- 2) Entice the brainwashing subjects into questioning and doubting their fundamental worldview values and convictions.
- 3) Teach a revisionist history that portrays America's capitalist free-market system as the source of all oppression and suffering.
- 4) Teach moral relativism and situational ethics in order to destroy morality and character.
- 5) Teach the importance of *group consensus and collectivism*, and the danger and consequence of individuality.
- 6) Teach feelings and personal subjective experiences over facts, reason, logic and context.

12 Mind-Control Tactics

- 7) Put the brainwashing subject into a state of fear, anxiety, confusion, and social turbulence in order to diminish the subjects' ability to think critically using reason, logic and context. The ultimate goal is to force the subject to surrender his or her values, and worldview to those of the change agents and their controlled and crafted group consensus.
- 8) Conceal the lies and evil agenda of the propagandist behind masking terms that sound good, but are chosen to shame and manipulate the targeted subjects into willingly embracing their own demise.
- 9) Use individuals in trusted institutions and occupations to give credibility to the worldview and values being introduced into the brainwashing subjects.
- 10) Set up a system of rewards, honor, recognition and advancement for those who embrace the worldview and values of the brainwashing program. Apply punitive consequences to any worldview and values that are contrary to the chosen worldview and values being inserted into the brainwashing subject.

12 Mind-Control Tactics

- 11) Use informants, gossips and tattletales to report on noncompliance and groups.
- 12) Create an atmosphere and environment of chaos, suffering, hopelessness and danger and then rescue the subjects from this condition so that the persecutor is perceived as being a friend, protector and savior [classic Stockholm syndrome].

https://leohohmann.com/2021/02/24/12-mind-control-tactics-used-by-globalist-establishment-elites-to-change-the-way-americans-think/

Biderman's Chart of Coercion

- **1) Isolation:** Deprives victim of all social support (for the) ability to resist. Allows victim to be present at all times to keep home environment stable and non-threatening. Makes victim dependent upon abuser.
- **2) Control or Distortion of Perceptions:** Fixes attention upon immediate predicament; fosters introspection. Eliminates information that is not in agreement with the abuser's message. Punishes actions or responses that demonstrate independence or resistance. Abuser manipulates by being charming, seductive, etc. to get what is wanted from victim and becomes hostile when demands are not met.
- **3) Humiliation or Degradation:** Wakens mental and physical ability to resist. Heightens feelings of incompetence Induces mental and physical exhaustion.
- 4) Threats: Creates anxiety and despair. Outlines abuser's expectations and consequences for noncompliance.
- 5) Demonstrating Omnipotence or Superiority or Power: Demonstrates to victim that resistance is futile.
- **6) Enforcing Trivial Demands:** Demands are often trivial, contradictory and non-achievable. Reinforces who has power and control.

Biderman's Chart of Coercion

- **7) Exhaustion:** The abuser uses sleep deprivation to keep victim in a state of confusion. Wakens mental and physical ability to resist Heightens feelings of incompetence Induces mental and physical exhaustion.
- **8) Occasional Indulgences:** Provides positive motivation for conforming to abuser's demands. Victim works to "earn" these indulgences in an effort to increase self-esteem.

https://mainestandsup.org/bidermans-chart-of-coercion/

https://en.wikipedia.org/wiki/Biderman's_Chart_of_Coercion

Compliance

- Most people would rather be in the majority, than be right.
- At least 20% of the population has strong authoritarian tendencies, which will emerge under the right conditions.
- Fear of death is only rivalled by the fear of social disapproval. The latter could be stronger.
- Propaganda is just as effective in the modern day as it was 100 years ago. Access to limitless information hasn't made the average person any wiser.
- Most people believe the government acts in the best interests of the people. Even many who are vocal critics of the government.
- Once they have made up their mind, most people would rather commit to being wrong, than admit they were wrong.
- Humans can be trained and conditioned quickly and relatively easily to significantly alter their behaviors for better or worse.
- When sufficiently frightened, most people will not only accept authoritarianism, but demand it.
- Most people value safety and security more than freedom and liberty, even if said 'safety' is merely an illusion.
- Most people care more about looking like they are doing the right thing, rather than actually doing the right thing.
- If you make people comfortable enough, they won't revolt. You can keep millions docile by giving them money, food, and entertainment.
- It's easier to fool a person than to convince them that they have been fooled.
- Most people are fairly compassionate and have good intentions. As a result, most people deeply struggle to understand that our 'leaders' can be evil.

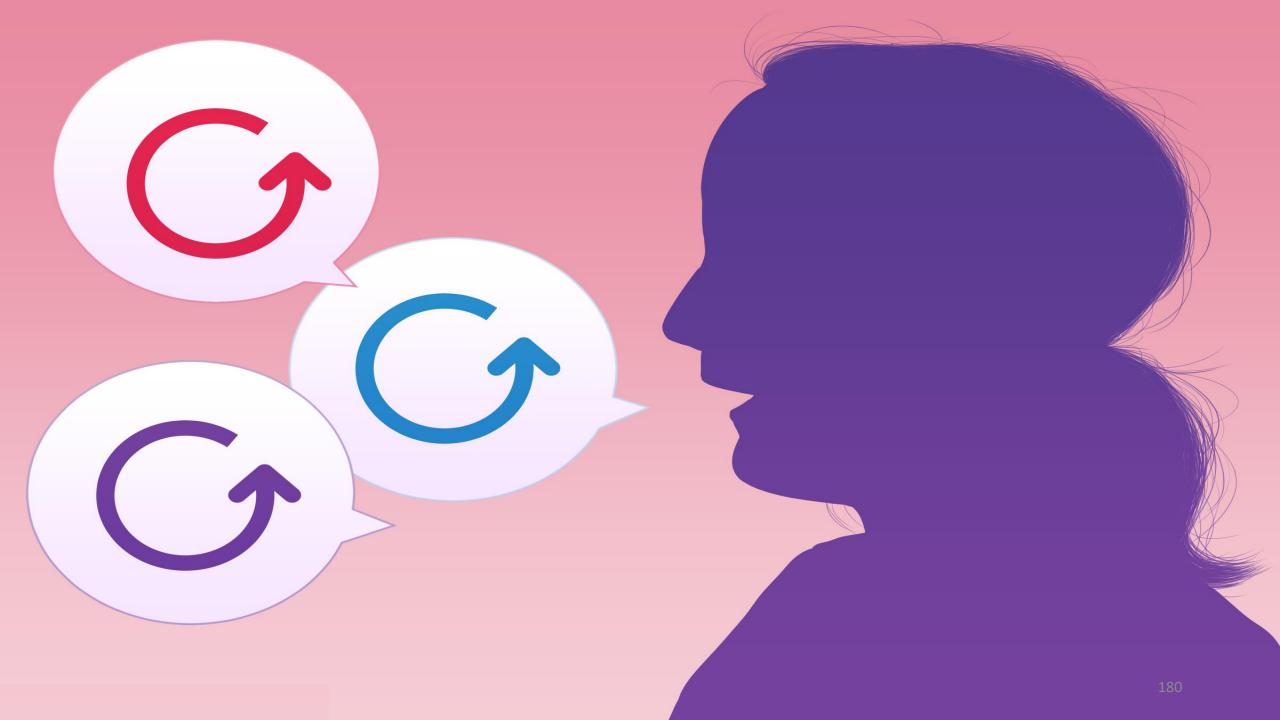

You heard it here first; lockdown is Orwellian mind control!

Through clever and constant application of propaganda, people can be made to see paradise as hell, and also the other way round, to consider the most wretched sort of life as paradise.

— Adolf Hitler —

Wash your hands!

Think of others!

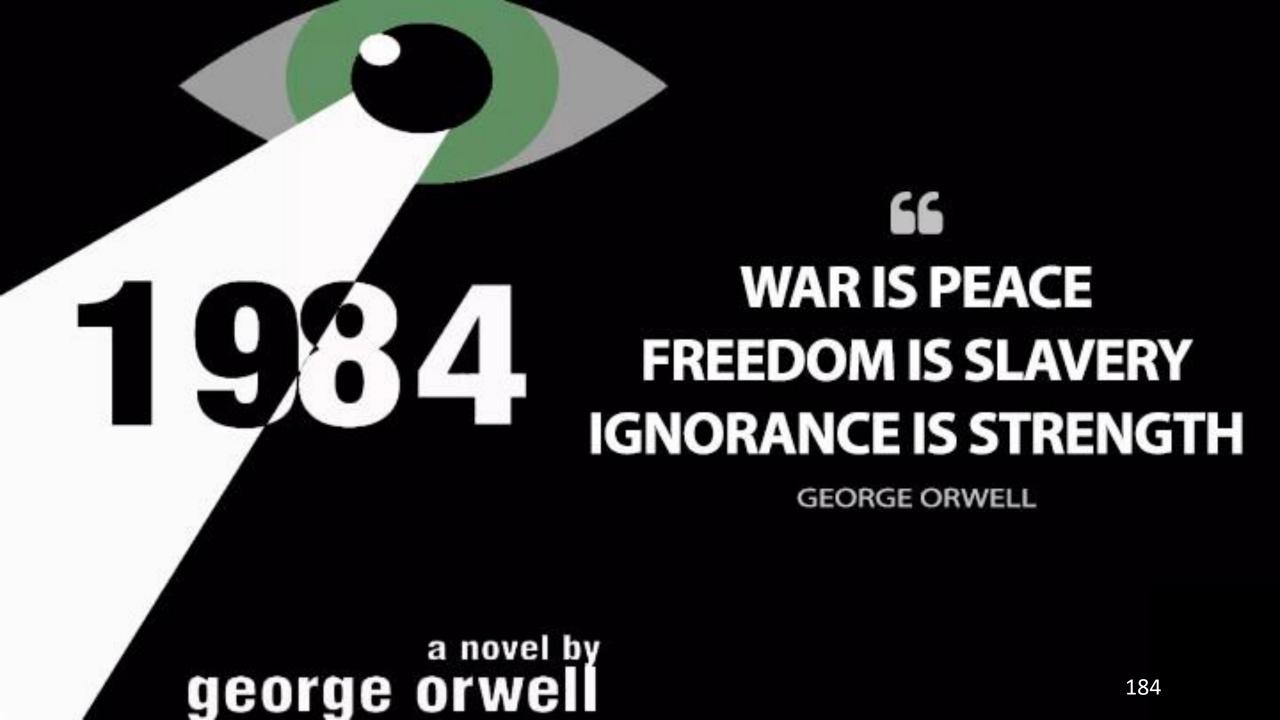

Avoid mass media!

Fight the lies!

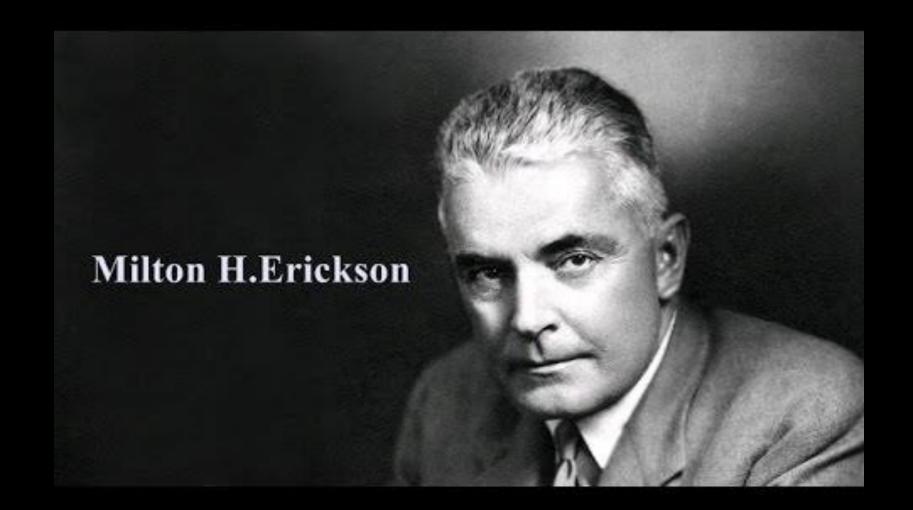

If you want a vision of the future, imagine a boot stamping on a human face forever.

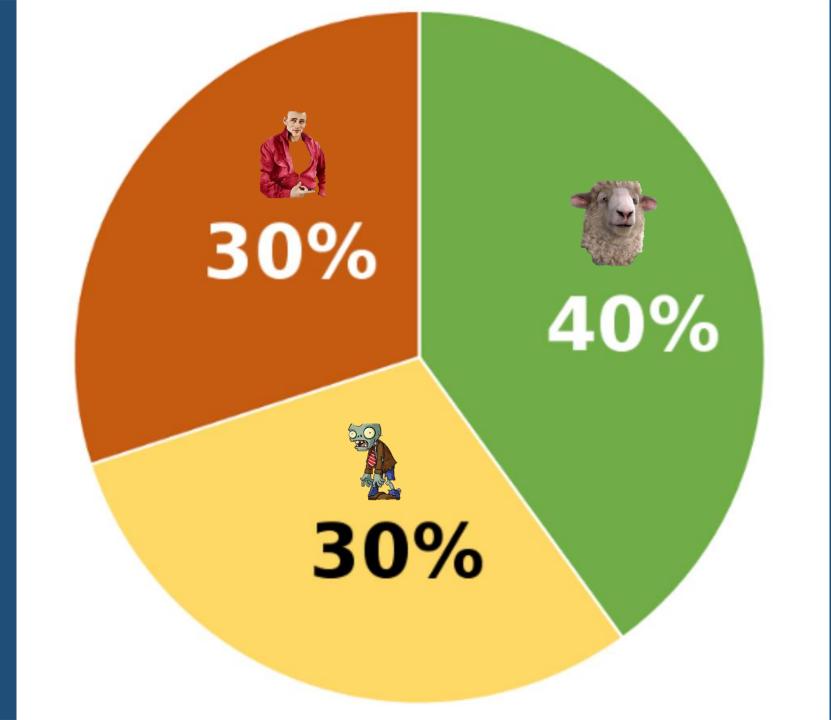

-George Orwell-

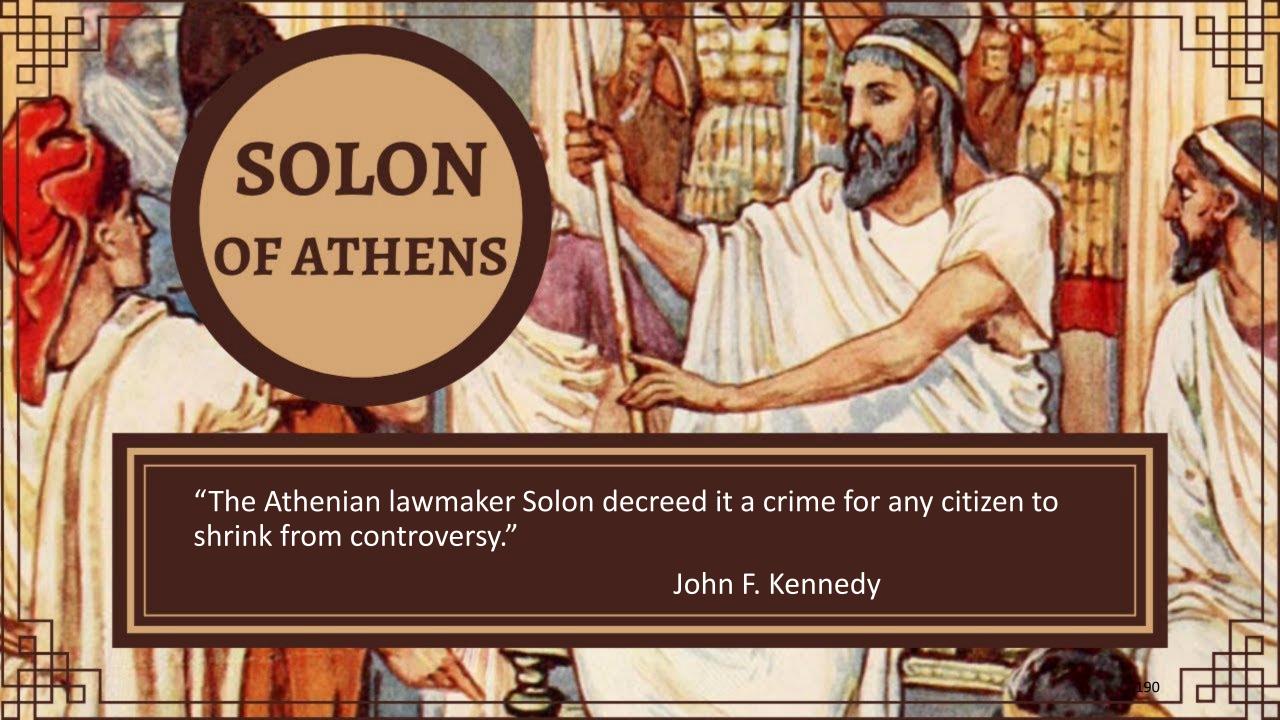

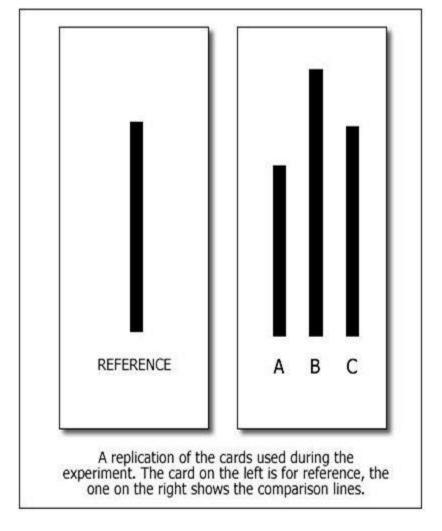

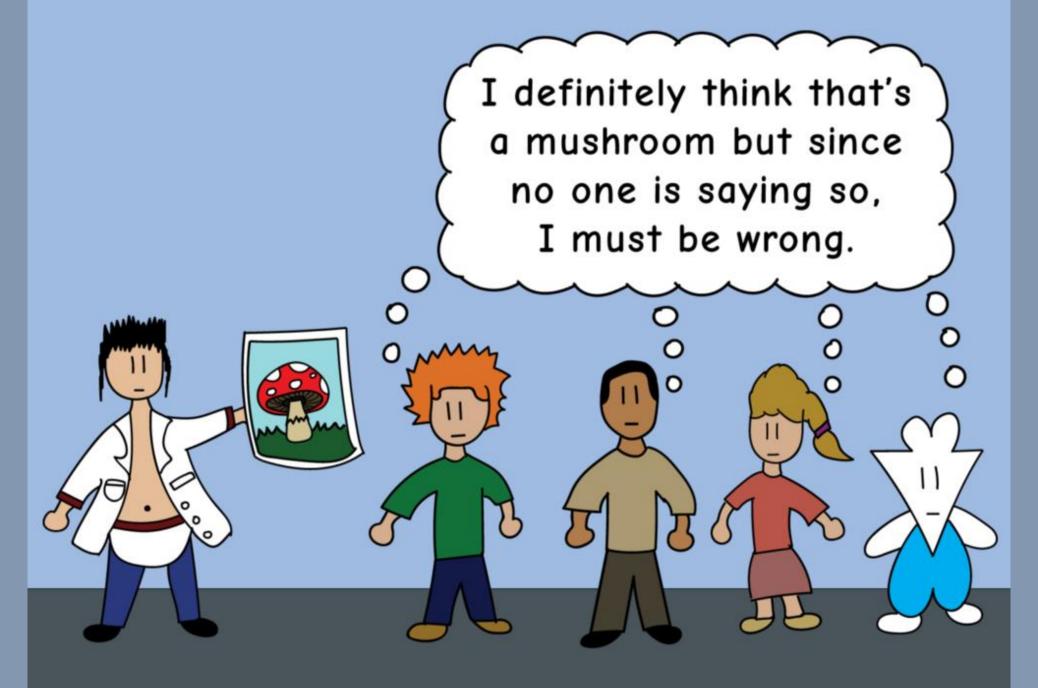

Group Pressure and Conformity

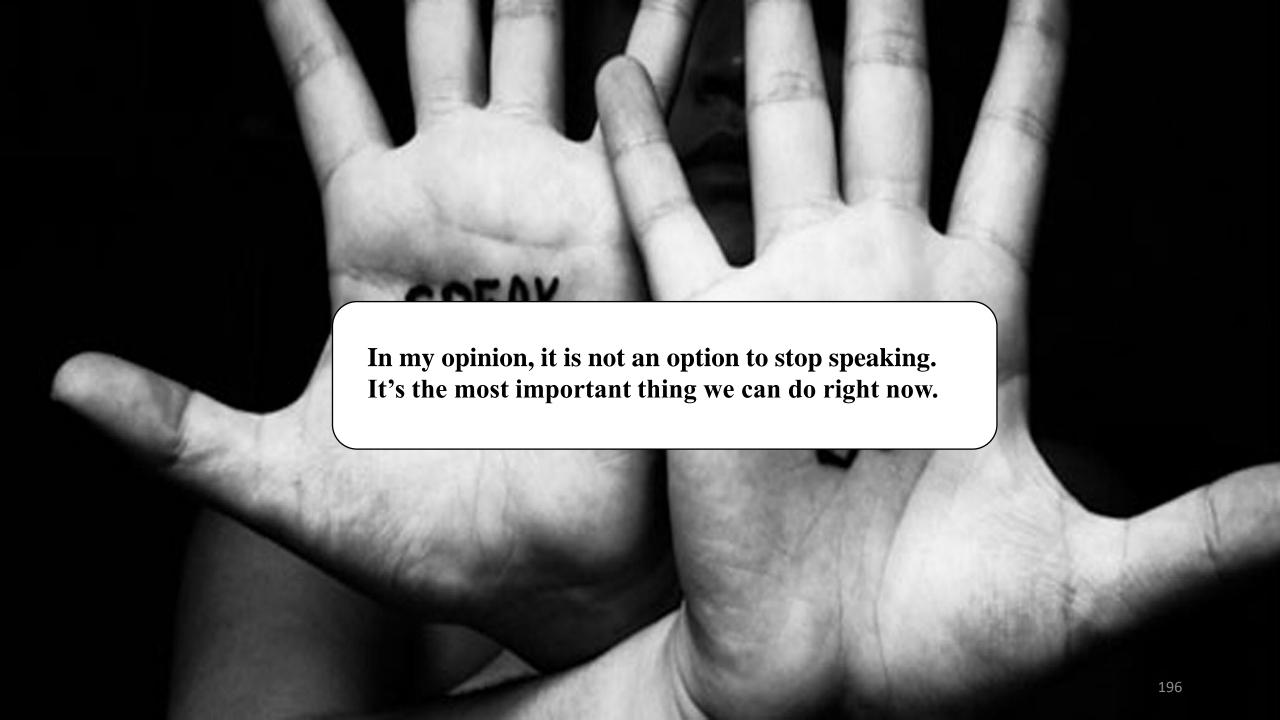

- Conformity- adjusting one's behavior of thinking to coincide with a group standard
- Solomon Asch Experiment-Actors pick the wrong line and then people are coerced by conformity to pick something they know is wrong
- Alone- less than 1% made mistake
- In Groups- wrong 33% of the time

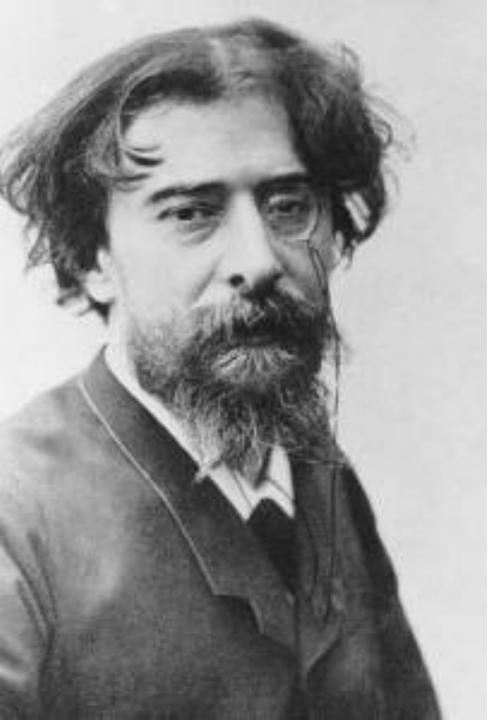

Disassociation of Ideas

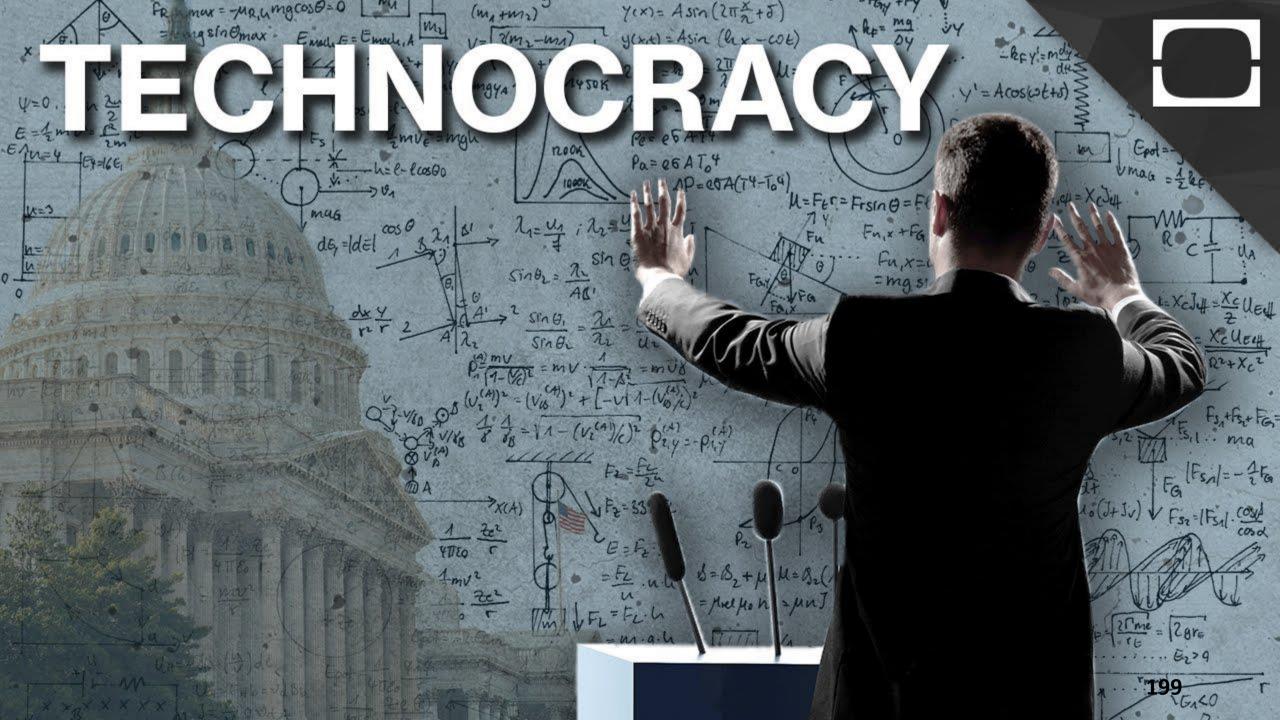

The term "dissociation of ideas" was coined by the French philosopher Remy de Gourmont, based on the Pavlovian discovery that the brain usually works in conditioned or habitual associations. To become more conscious and intelligent, de Gourmont proposed, examine all your habitual associations and try negating them.

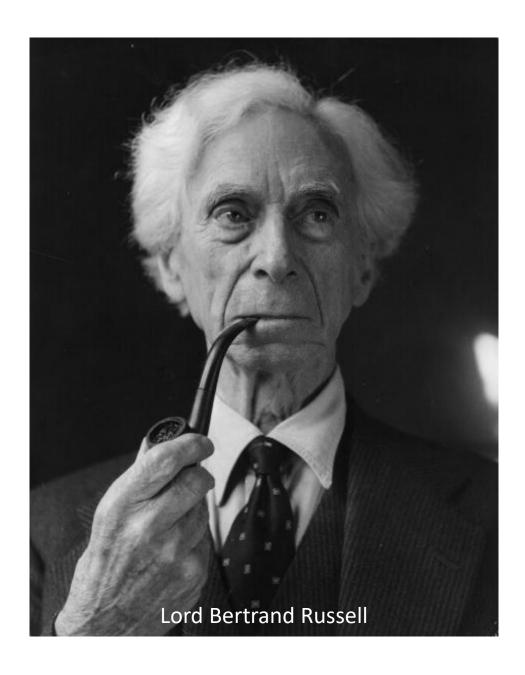

For instance, if you mechanically associate technology with badness, try making a list of ten inventions that you really would not want to do without, starting with the computer that brought you this intriguing experiment. Then add ten more. By then your dislike for technology should be somewhat less all-inclusive and more reasoned.

On the other hand, if you robotically associate technology with goodness, make a similar list of 20 things we could damned well do without, starting with the hydrogen bomb. Your allegiance to technology should then be somewhat more conscious and less mechanical.

Try the exercise every day, testing a new association each time. After all, the Sufis say if you can live even ten minutes without conditioned reactions, you are Illuminated.

"The subject [of mass psychology] will make great strides when it is taken up by scientists under a scientific dictatorship.... The social psychologists of the future will have a number of classes of school children on whom they will try different methods of producing an unshakable conviction that snow is black. Various results will soon be arrived at.

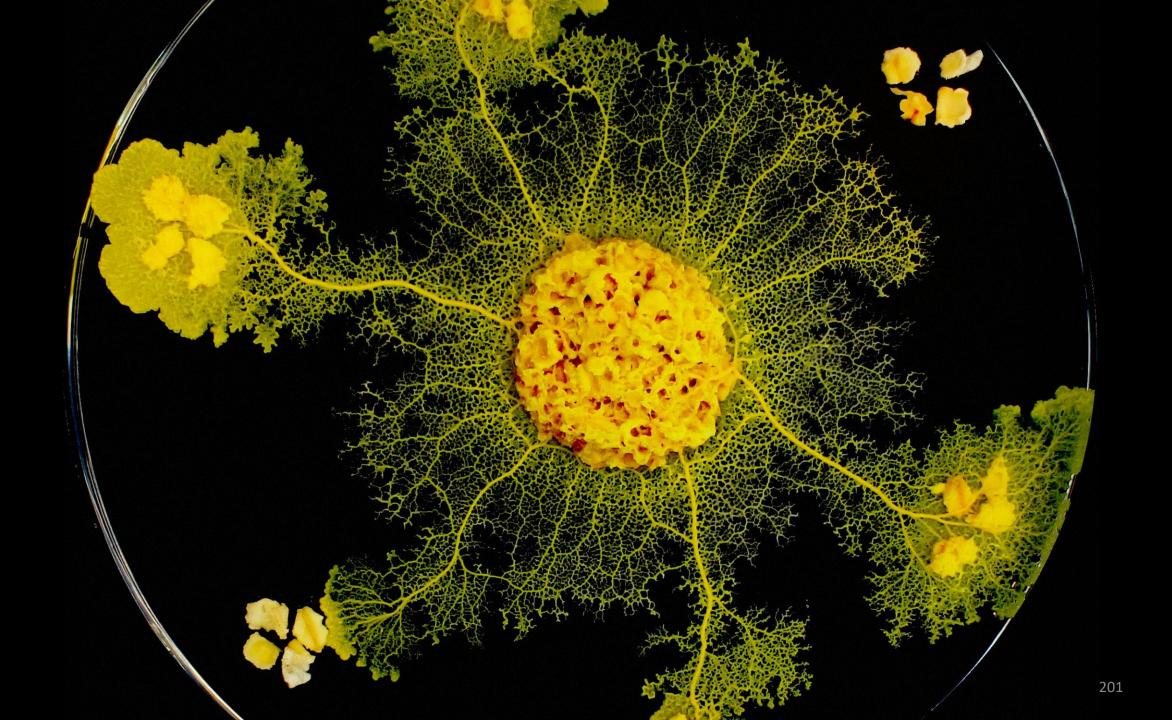

First, that the influence of home is obstructive.

Second, that not much can be done unless indoctrination begins before the age of ten.

Third, that verses set to music and repeatedly intoned are very effective.

Fourth, that the opinion that snow is white must be held to show a morbid taste for eccentricity.

But I anticipate. It is for future scientists to make these maxims precise and discover exactly how much it costs per head to make children believe that snow is black, and how much less it would cost to make them believe it is dark gray.... When the technique has been perfected, every government that has been in charge of education for a generation will be able to control its subjects securely without the need of armies or policemen."

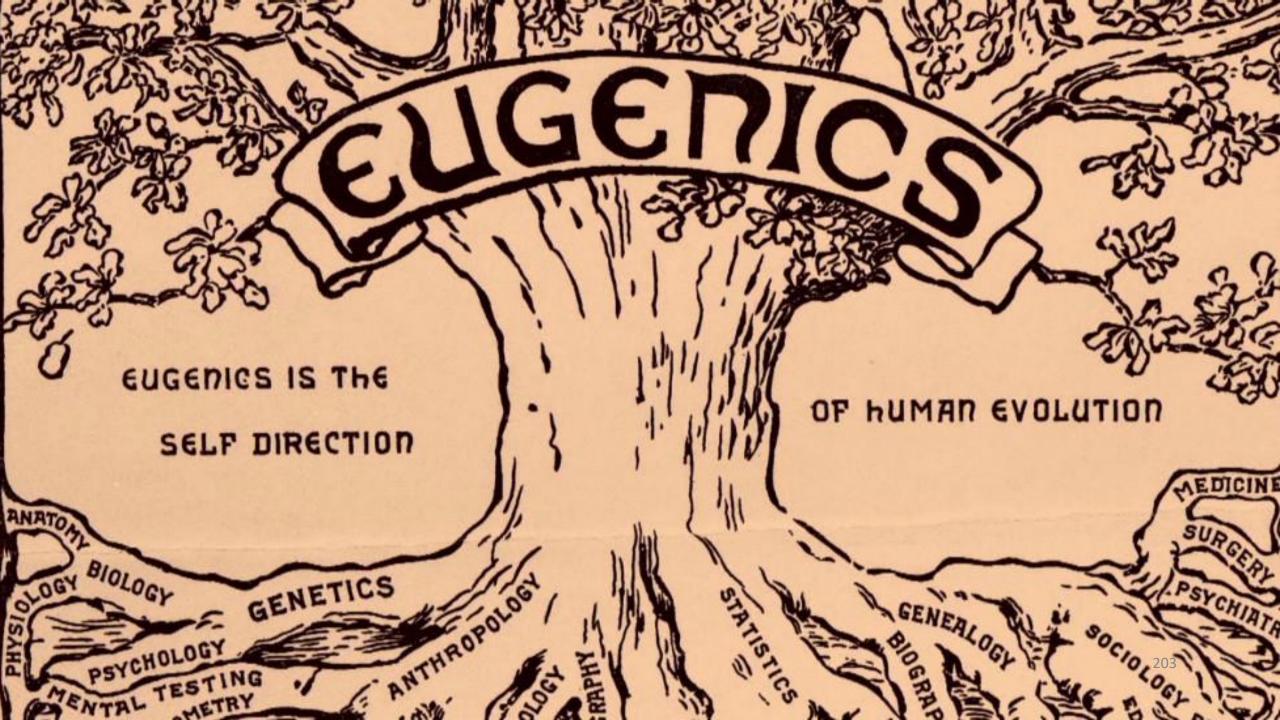

"Gradually, by selective breeding, the congenital differences between rulers and ruled will increase until they become almost different species. A revolt of the plebs would become as unthinkable as an organized insurrection of sheep against the practice of eating mutton."

.

"Diet, injections, and injunctions will combine, from a very early age, to produce the sort of character and the sort of beliefs that the authorities consider desirable, and any serious criticism of the powers that be will become psychologically impossible."

 Bertrand Russell, The Impact of Science on Society (1953) pgs. 49-50

NSSINGER REPORT

IMPLICATIONS OF WORLDWIDE POPULATION GROWTH FOR U.S. SECURITY AND OVERSEAS INTERESTS; THE 1974 NATIONAL SECURITY STUDY MEMORANDUM

ALSO, THE INITIATING MEMO AND FORD IMPLEMENTATION MEMO (NSDM 314)

Julian Huxley, Founding of UNESCO, 1946

"Thus even though it is quite true that any radical eugenic policy will be for many years politically and psychologically impossible, it will be important for UNESCO to see that the eugenic problem is examined with the greatest care, and that the public mind is informed of the issues at stake, so that much that now is unthinkable may at least become thinkable."

Who said this?

What most frequently meets our view (and occasions complaint) is our **teeming population**. **Our numbers are burdensome to the world, which can hardly support us**. . . . In every deed, pestilence and famine . . . wars and earthquakes have to be regarded as a remedy for nations, as the means of **pruning the luxuriance of the human race**.

If I were reincarnated I would wish to be returned to Earth as a killer virus to lower human population levels.

The Global 2000 Report

Some parts of the world will probably reach limits to growth in the next decade or two. The reasons are well known-a 3 percent annual increase in population leads to a doubling in about 24 years. Such a rate of increase in food production cannot be sustained indefinitely. The problem has been treated many times, including studies by the Club of Rome. On 24 July the federal government got into the act with a report of about 800 pages entitled The Global 2000 Report to the President.

On 23 May 1977 President Carter called for "a one year study of the probable changes in the world's population, natural resources and environment through the end of the century." The Council on Environmental Quality and the Department of State were designated as lead agencies and were authorized to call on other appropriate federal agencies for assistance. A reading of portions of the report produced after 3 years reveals more about the functioning of the federal government than it conveys new reliable information about the future of the world.

Some of the agencies responded quickly while others were slow. Thus, part of the material is outdated. The energy projections were made in the spring of 1978 before the Iran crisis. At that time oil prices seemed stable at about \$13 a barrel. Accordingly, the Department of Energy (DOE) made projections of energy use on the basis that, in constant dollars, the price would remain \$13 a barrel until 1990. The drastic change that occurred in 1979 goes largely unrecognized, as does the current sharp decline in U.S. consumption of oil. In 1978 the common view was that oil production would continue to increase until it peaked in about 1990. But experts are now saying that the peak probably occurred in 1978. The material also contains at least two other significant errors. The oil in place at Athabasca and other formations in the region is now estimated at 1300 to 2400 billion barrels (the older DOE figure was 895 billion barrels). That in Venezuela is placed at 700 billion to 3000 billion barrels (the DOE estimate was 200 billion barrels).

A chapter on environmental projections has a section on "The use of chemicals in the development of societies" in which one of the State Department employees provided this gem: "It was not until the end of the 19th century that the use of chemicals in society began to become widespread. . . . This development coincided with the discovery that crude oil . . . could also be used as a new source of supply of chemicals. A new scientific discipline emerged, to expand the utility of crude oil: organic chemistry." In point of fact, organic chemistry began in 1828 with Wöhler. By the 1880's the German chemical industry was a billion-dollar-a-year enterprise (in 1880 dollars). It was producing a great variety of organic chemicals, including dyestuffs from coal tar. Use of petroleum as a feedstock became important only in the 1930's.

Deforestation is very serious in parts of the world. However, the author of the chapter on forestry has made questionable statements about the Amazon Valley. He quotes an estimate that the area is being deforested at the rate of 4 percent a year, with half the forest to be removed by 2000. My informant at the Brazilian Embassy scoffed, "Has the man flown over the Amazon?" He went on to state that road-building there has almost stopped-the energy crisis has caused a shift in priorities.

The report has other deficiencies of analysis and consistency. It projects continued fast growth in gross national product in less-developed countries (LDC's) without adequate discussion of the impact of sharp increases in the price of oil. It projects virtually unchecked population growth in LDC's and corresponding increases in food production while emphasizing losses in cropland due to desertification, deforestation, water logging, urbanization, and soil erosion.

The report is correct in emphasizing that the world faces decades of difficulties and some of its sections are well done. But outdated material and inaccuracies detract from its value.-PHILIP H. ABELSON

THE LIMITS LIMITS ROWTH

Donella H. Meadows Dennis L. Meadows Jorgen Randers William W. Behrens III

The Impact of Science on Society

At present the population of the world is increasing at about 58,000 per diem. War, so far, has had no very great effect on this increase . . . but perhaps bacteriological war may prove effective. If a Black Death could spread throughout the world once in every generation, survivors could procreate freely without making the world too full. There would be nothing in this to offend the conscience of the devout or to restrain the ambition of nationalists. The state of affairs might be somewhat unpleasant, but what of it? Really high-minded people are indifferent to happiness, especially other people's.

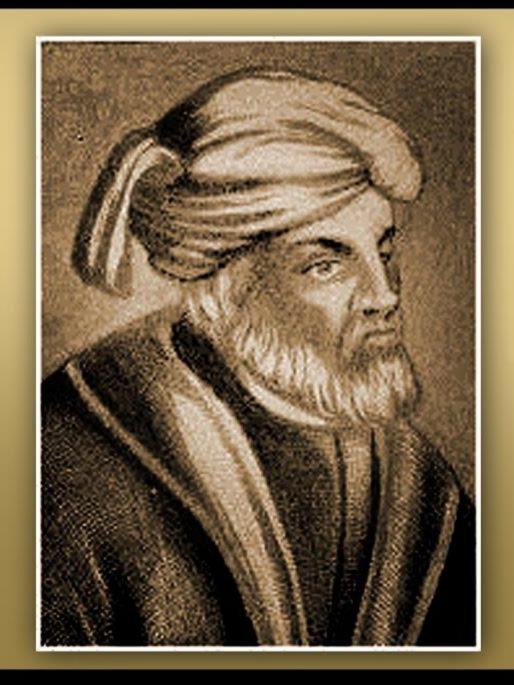

AN ESSAY ON

THE PRINCIPLE OF POPULATION

THOMAS Malthus

"Instead of recommending cleanliness to the poor, we should encourage contrary habits. In our towns we should make the streets narrower, crowd more people into the houses, and court the return of the plague. In the country, we should build our villages near stagnant pools, and particularly encourage settlement in all marshy and unwholesome situations. But above all we should reprobate specific remedies for ravaging diseases; and restrain those benevolent, but much mistaken men, who have thought they are doing a service to mankind by protecting schemes for the total extirpation of particular disorders."

TERTULLIAN of Carthage (190-225),

Word Population was about 190 million people

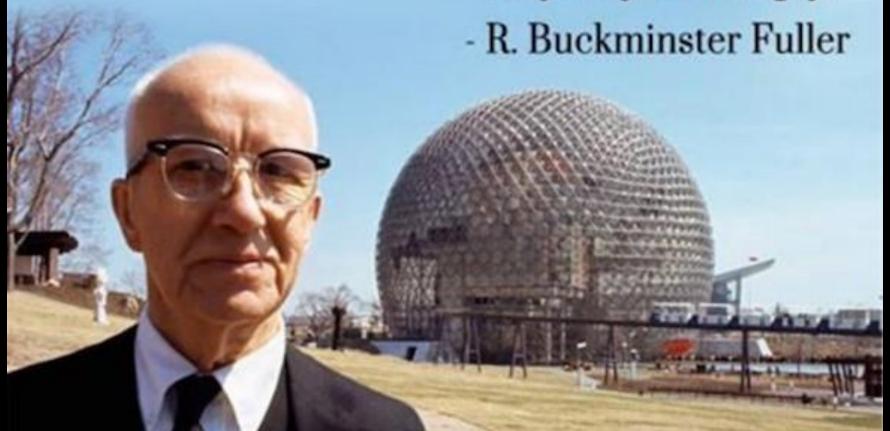

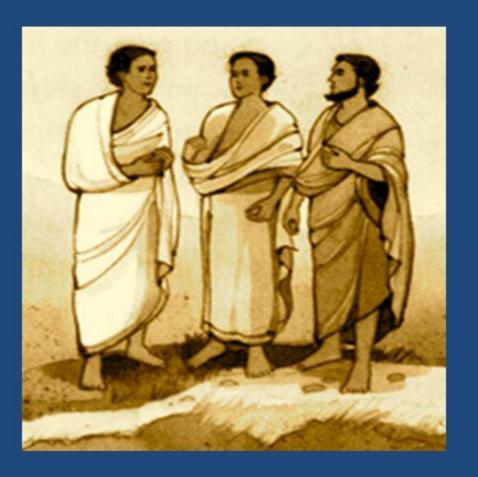

The entire world population could fit in Texas allotting 330 square feet per person. The area of Texas is about 262,000 square miles.

"It is now highly feasible to take care of everybody on Earth at a higher standard of living than any have ever known. It no longer has to be you or me. Selfishness is unnecessary. War is obsolete. It is a matter of converting the high technology from weaponry to livingry."

OLIGARCHY

Most oligarchs were aristocrats. Some were wealthy merchants. The oligarchs ignored the needs of the majority of the people and passed laws that favored the rich. These laws protected and increased their own wealth.

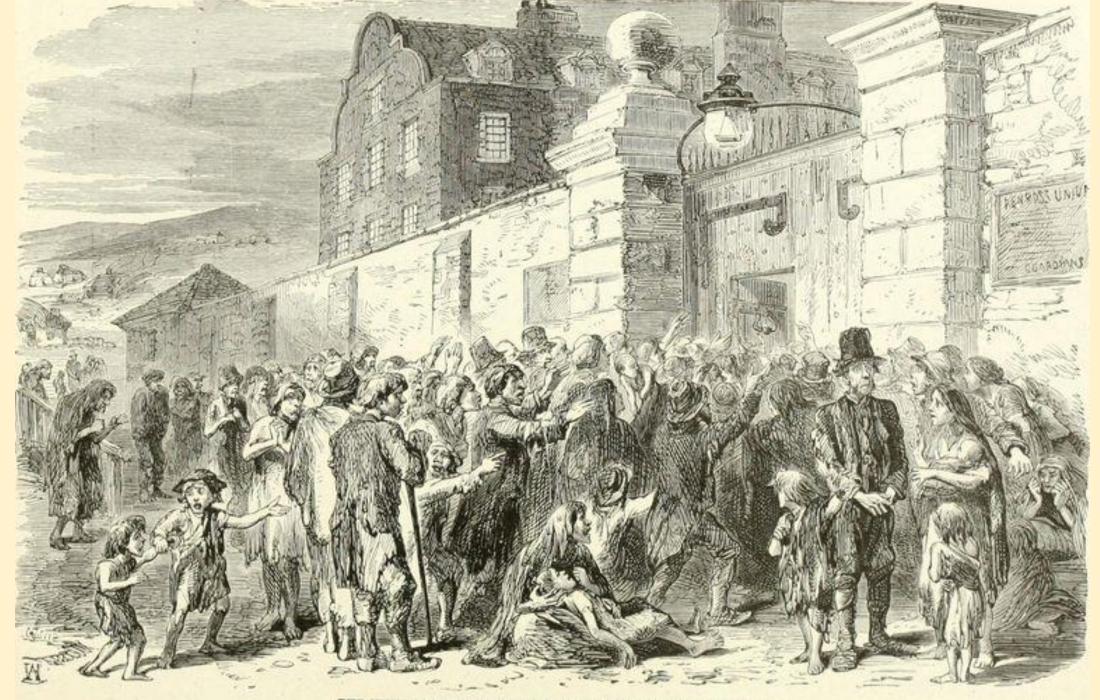

Oligarchy (rule of a few) includes both, aristocracy (rule by nobility) and plutocracy (rule by wealthy).
